30. (Currently Amended) A power converter, comprising:
- a first circuit converting an AC input voltage to a first ~~predetermined~~ DC output voltage;
 - a second circuit converting a DC input voltage to a second ~~predetermined~~ DC output voltage; and
 - an third circuit having a feedback loop and receiving said first and second ~~predetermined~~ DC voltages and, in response thereto, providing a selectable DC output voltage at a first output, wherein said selectable DC output voltage is established as a function of a removable program module, the removable program module selectively establishing a resistor as a part of the feedback loop of the third circuit.
31. (Original) The power converter of Claim 30 wherein said first and second ~~predetermined~~ DC ~~output~~ voltages are substantially the same and are provided to a common node.
32. (New) The power converter of Claim 30 wherein the third circuit comprises a pulse-width modulator (PWM), the resistor establishing a duty cycle of the PWM.
33. (New) The power converter of Claim 30 wherein the resistor is disposed in the removable program module.
